Education

Graphic Era Hill University **Aug 2022 – May 2026**

Bachelor of Technology in Computer Science (CGPA: 8.60/10) *Bhimtal, Uttarakhand*

Experience

EXL Services **Mar 2025 – Jul 2025**

Software Development Engineer Intern *Remote*

Banking Management System | *Java, Jersey, Hibernate, MySQL, REST APIs, Maven, JUnit, Postman, Agile*

- Optimized backend modules for account management and transaction processing using Java, Hibernate, and MySQL, reducing data retrieval latency through query and indexing improvements.
- Integrated **15+ REST API workflows** with persistence layers and JUnit-based unit testing, supporting application scalability and data consistency.
- Validated backend services through Postman API testing and automated workflows, increasing application reliability by 10% and reducing input errors.
- Used Git and GitHub for feature branches, pull requests, merge-conflict resolution, and peer code reviews within an Agile workflow.

Sprint Workspace (Hackathon) | *React.js, JavaScript, Agile, Sprint Management*

- Developed a full-stack Agile sprint management platform for sprint planning, deployment tracking, test-case management, blocker monitoring, retrospectives, dashboards, and team collaboration.

Projects

Food Health Rating System | *Python, Flask, OpenCV, Tesseract OCR, SQLite* | GitHub **Jan 2026 – May 2026**

- Built a Flask-based interface for real-time food analysis, scan history, and personalized recommendations.
- Achieved **83% analysis accuracy** using OpenCV, Tesseract OCR, and RapidFuzz for packaged food-label analysis.
- Designed a **5-stage data processing pipeline** covering OCR preprocessing, ingredient parsing, fuzzy matching, and personalized health scoring.

E-Waste Facility & Resale Platform | *Python, Django, SQLite, Tesseract OCR* | GitHub **Oct 2025 – Dec 2025**

- Developed a full-stack Django platform with an interactive Leaflet.js map for facility discovery, real-time distance calculation, and facility rankings.
- Engineered a pricing engine supporting **20+ device configurations** with condition-based valuation and age depreciation for price prediction.
- Implemented secure user authentication and a personalized dashboard for recycling history, resale earnings, and environmental impact.

Technical Skills

Languages: Java, Python, C++, C, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, NumPy, Flask, Jersey, Hibernate, OpenCV

Databases: MySQL, SQLite

Core Concepts: Object-Oriented Programming, Data Structures & Algorithms, REST APIs, DBMS, OS, Computer Networks

Tools & Platforms: Git, GitHub, JUnit, Postman, VS Code

Extracurricular

- Solved **500+ Data Structures and Algorithms problems** across LeetCode and GeeksforGeeks using C++ and Java.
- Achieved a competitive **1730+ rating**, reflecting consistent performance in algorithms and data structures.
- Ranked among the **top 11% globally**, demonstrating strong analytical and logical thinking.
- Contributed software solutions spanning frontend development, REST APIs, data processing, full-stack development, and database systems.
